3. Shingle cuts extended past drip edge.*

4-5. Wood grain vinyl-coated aluminum trim with double-bent edges.

6. Stainless steel butt hinges.

7. Fiberglass entry door with keyed lock (standard on vinyl buildings).

8. Lifetime warranted Vinyl siding made from 100% Virgin PVC with no additives for fillers.

9. All structural components are fastened with nails.*

10. Pressure-treated floor joists.*

11. 5/8" coated engineered floor sheeting (Smart floor by LP) with zinc borate treatment.*

12. Double studded corners in wall framing.*

13-14. Double top wall plates, interlocking at corners.*

* Standard feature on both heavy duty vinyl and heavy duty Smart Side/Duratemp Peak series.

6-YEAR
Top-to-Bottom
WARRANTY

Features:

1. GAF / ELK **lifetime warranted** architectural shingles.
2. All **shingles** are **installed with nails**.
3. Shingle cuts **extended** past drip edge.
4. **Woodgrain vinyl-coated** aluminum trim.
5. Aluminum trim with **double-bent edges**.
6. **Stainless steel butt hinges**.
7. **Fiberglass entry door** (standard on vinyl buildings).
8. **Lifetime warranted Vinyl siding** made from **100% Virgin PVC** with no additives for fillers.
9. All **structural components** are **fastened with nails**.
10. **Pressure-treated floor joists**.
11. **5/8" coated engineered floor sheeting** (Smart floor by LP) with **zinc borate treatment**.
12. **Double studded corners** in wall framing.
13. **Double plated** top wall plates.
14. **Interlocking** top wall plates at corners.
15. **High quality** kiln dried framing lumber with very few knots and little or no bark. Spaced on **16" centers** for framing.

Yes There IS a Difference! Compare to Other Manufacturers

1. Three-tab shingles with 25 or 30 year warranty, or architectural shingles with lesser sealing qualities, lesser warranties and quality of shingles.
2. Shingles installed with staples.
3. Shingles cut flush with the end of the drip edge. As shingles age they will shrink, exposing the drip edge to rain and snow. When this happens, water will run underneath your shingles and rot out your roof.
4. Flat painted aluminum trim with no wood grain.
5. Edges with no bends that have no protection against buckling.
6. Steel T-hinges that are screwed to the face of the door. These hinges will eventually run rust streaks down over the face of your door.
7. A wood door covered with vinyl siding or a steel entry door. A steel entry door is very easy to dent and if scratched it is impossible to touch up so that it cannot be seen. Steel doors also have exposed wood around the sides which will eventually rot.
8. Many vinyl sidings on the market use fillers such as sand or other by-products to reduce the amount of resins needed to make the siding. This is why many vinyl sidings fade after installation.
9. Staples are commonly used for many construction applications.
10. Regular kiln-dried 2x4 floor joists.
11. Regular plywood or OSB floor sheeting with no manufacturer's warranties.
12. Single-studded corners.
13. Single-plated top wall plates.
14. Wall plates are just butted together and toe-nailed.
15. Lower quality lumber that has not been properly dried will crack, twist or bow as it dries out. Improperly dried wood will also grow mold and fungus.

Features Benefits:

Discover the
VALUE!

1. GAF / ELK is the best sealing and highest quality shingle we have ever used. The lifetime architectural shingle adds beauty and an extended life to your roof. This shingle has great wind resistance.
2. Shingles installed with nails have a much better holding power and a greater wind resistance.
3. Shingles that are extended past the roof edges allow for shrinkage and preserve your building for decades of use.
4. Beautiful woodgrain vinyl coating; has better fade resistance; is thicker and more rigid, making it buckle-resistant and impact-resistant.
5. Double-bent edges keep the trim more rigid and protect it from buckling. It also has a stronger wind resistance.
6. Stainless steel will never rust. The screws are concealed, making the door burglar-resistant. No screw holes in the face of the door.
7. Fiberglass doors are the most durable doors on the market. Fiberglass doors have a high impact resistance. If ever scratched, they can easily be touched up. Has a beautiful raised panel woodgrain appearance. They will never rust, and all edges are sealed with no wood exposed to the elements. The interior core of the door is insulated with spray foam insulation.
8. You get the peace of mind that your shed has one of the best vinyl sidings on the market. This 100% PVC product is guaranteed not to fade as it ages. It has one of the better wind load and impact resistance ratings on the market.
9. Nails offer more holding power and ensure that your structure will stay as secure as the day it was built.
10. Pressure-treated floor joists add many years of rot-free and termite-resistant protection to your floor. Your building will only last as long as the foundation it is built on.
11. 5/8" engineered sheeting gives you added support needed for riding mowers, ATV's and other heavy storage. This is a solid compressed product, unlike plywood, which may have voids in the plys, causing weak spots or delamination in the floor. Zinc borate treatment is a long-acting preservative against moisture, mold, rodents, and termites. The coated overlay gives you a clean appearance and makes cleanup jobs much easier.
12. Ensures you extra strength and stability at the corners of your structure.
13. Strengthens the walls at a crucial structural point. Keeps your walls from bowing out and ensures that your roof will not sag or bow.
14. The wall plate corners fit together snug like a puzzle, then are nailed thru the top plate into the bottom plate. This ensures you a rock-solid corner joint that will not separate.
15. All wood used is guaranteed to be structurally sound. The inside of your building will have a clean appearance. You will see very little, if any imperfections on the lumber. We guarantee termite-free and mold-free wood. 2x4's are spaced on 16" centers for a solid structure.

Peak Style

Heavy Duty Smart Side /Duratemp Series

Features & Benefits

15. High quality kiln dried framing lumber with very few knots and little or no bark. Spaced on 16" centers for framing.*

13. **Double plated** top wall plates.
14. **Interlocking** top wall plates at corners.
15. **High quality** kiln dried framing lumber with very few knots and little or no bark. Spaced on **16" centers** for framing.

Yes There IS a Difference! Compare to Other Manufacturers

1. Three-tab shingles with 25 or 30 year warranty, or architectural shingles with lesser sealing qualities, lesser warranties and quality of shingles.
2. Shingles installed with staples.
3. Shingles cut flush with the end of the drip edge. As shingles age they will shrink, exposing the drip edge to rain and snow. When this happens, water will run underneath your shingles and rot out your roof.
4. Roof edge flush or with no overhang.
5. Lesser quality paints that may not have fade resistant qualities or warranties.
6. Steel T-hinges that will eventually rust.
7. 2 x 3 or 2 x 4 door frames laid flat. In some cases, no door frames.
8. Regular plywood-type T-111 with a non-coated exterior finish. As this product ages, it will actually wick moisture, causing separation and delamination to the entire panel.
- 8a. Unprimed exterior siding products.
9. Staples are commonly used for many construction applications.
10. Regular kiln-dried 2x4 floor joists.
11. Regular plywood or OSB floor sheeting with no manufacturer's warranties.
12. Single-studded corners.
13. Single-plated top wall plates.
14. Wall plates are just butted together and toe-nailed.
15. Lower quality lumber that has not been properly dried will crack, twist or bow as it dries out. Improperly dried wood will also grow mold and fungus.

1. GAF / ELK is the best sealing and highest quality shingle we have ever used. The lifetime architectural shingle adds beauty and an extended life to your roof. This shingle has great wind resistance.
2. Shingles installed with nails have a much better holding power and a greater wind resistance.
3. Shingles that are extended past the roof edges allow for shrinkage and preserve your building for decades of use.
4. Adds extra protection from snow and ice buildup in front of the double door. Adds beauty to your building.
5. No body likes to paint! Our coatings will last years longer than most of the latex paints on the market today. You have the peace of mind of knowing that your building will keep its original beauty for many years.
6. The piano hinge has continuous support along the entire door. It is fully aluminum and will never rust. Unlike T-hinges, the fasteners are covered by trim, making it burglar-resistant.
7. 2 x 4's set on edge will keep your doors rigid, discouraging the top of your doors from bowing out and being open to the elements, and also keeping the bottom of doors tight to discourage entry of unwelcome critters.
8. LP SmartSide is designed to withstand many years of exposure to the environment (50 year warranty). With a warranty like this you can't go wrong! This is an engineered product with zinc borate treatment (a long-acting treatment against moisture, mold and termites). The interior of this siding has a coating which gives your interior a consistent appearance. Fir Duratemp plywood siding has a hardboard exterior finish, which is insect and moisture repellent.
- 8a. Factory pre-primed panels add another layer of protection against Mother Nature. It also improves the quality of paint finish on your building.
9. Nails offer more holding power and ensure that your structure will stay as secure as the day it was built.
10. Pressure-treated floor joists add many years of rot-free and termite-resistant protection to your floor. Your building will only last as long as the foundation it is built on.

General SPECS

Delivered fully finished, ready to use,
to your specifications and color choices.

Discover the
VALUE!

1. Framing Specs:

All framing components are made of high quality, kiln dried 2x4's to ensure that your framing lumber will not twist or bow. We guarantee clean, termite-free and mold-free wood, with a beautiful appearance.

All framing on our heavy duty buildings consists of 2x4's spaced on 16" center for walls and roof (with the exception of the walls on board 'n' batten sided buildings, where 2x4's run horizontally on 24" centers).

2. Roof Sheathing:

Standard roof sheathing is 7/16" OSB or 1/2" CDX plywood. (Standard product will vary by sales location). You have a choice of which product you want installed on your roof.

3. Lifetime shingle Roof:

Choose from 7 standard colors, or exact matching is also available. Architectural shingles are standard, and carry a lifetime warranty. Drip edge is used on all roof edges. (We recommend adding a ridge vent to eliminate fumes and intense heat buildup in the roof of your structure). We also offer metal roofing.

4. Exterior Sheathing/Siding Combination:

For T-111 buildings: Our standard wall sheathing/siding for T-111 style buildings is LP Smart Side® which carries a 50-year warranty against splitting, cracking, or delamination. We recommend this product for durability. We also offer a fir plywood-based product called Duratemp®. Both products are available in 22 colors. (Standard product will vary by sales locations. Ask your sales rep which product is best for your application.)

5. Wall Sheathing:

For vinyl, cedar, or log-sided buildings: Our standard wall sheathings (underneath these siding applications) are 7/16" OSB or 1/2" CDX plywood. (Standard product will vary by sales location. You have a choice of which product you want installed underneath your siding.)

6. Lifetime vinyl Siding:

Standard vinyl siding (4 1/2" Dutch lap) carries a lifetime manufacturer's warranty. Available in 8 standard colors and 15 optional colors. You also have the option of exactly matching your house siding.

7. Wood Siding:

Board 'n' Batten, log, and cedar siding comes with 5 stain choices.

8. Windows:

LP-sided, Duratemp-sided, and vinyl-sided buildings are standard with aluminum single-hung windows with screens. (Shutters are standard with all aluminum windows). Window size choices are 18" x 23" or 18" x 36" or 24" x 36". Board 'n' Batten, log-sided and cedar-sided buildings are standard with rustic hand-made wood square-top windows. (Wood windows do not include shutters). Window size choices are 25" x 28" or 24" x 36" single-hung.

9. Doors:

All wood-sided buildings (LP SmartSide, Duratemp, Board 'n' Batten, Cedar or Log) include doors with matching siding. All vinyl-sided buildings are standard with a fiberglass raised-panel door.

(Doors and windows can be placed wherever you prefer at no additional cost.)
